

Face Timer

In this program we will be using some functions of Opencv library to open the webcam , write text on the the screen and capture the image by a single click .

The Libraries we will be using are: -

- **cv2:** This is the OpenCV module for Python used for face detection and face recognition.
- **time:** This is used to detect the activity with respect to time .

Camera_timer.py

- In this program we will be taking the input of webcam using VideoCapture function of cv2
- Later we will be using putText function which will help us writing in the screen ,the while loop is used for countdown.
- And as soon as the timer ends the system will capture the frame using imwrite function .

Output :
